In order to compile the code in the sub-directory "Projects," you will need a copy of the Max SDK, which is a free download from: http://cycling74.com/downloads/sdk/

Install the SDK folder "c74support" one level up from the directory in which you are reading this note. The current distribution was compiled using Max SDK version 6.1.4 and Xcode 6.3.2. The project files found here could be broken by new versions of either the Max SDK or Xcode. Stranger things have happened. Be prepared to fiddle around to obtain the joy you seek.

Good luck!
